Brad Wyatt

brad@BradWyatt.com Cell: (650) 260-8232 linkedin.com/in/brad-wyatt

Carnegie Mellon University

Graduation: **May 2016**

Bachelor of Science in **Decision Science**
Double Minor in **Business** and **Innovation, Economics, and Entrepreneurship**

Technical Skills: ETL (Snaplogic, ETLWorks), Python, JavaScript, SQL, SQL Server, Excel, RPA, R, SAS
Professional Skills: Attention to Detail, Troubleshooting, Adaptability, Leadership

---

Integration Developer, OpenGov, San Francisco, CA — March 2022 – Present

OpenGov develops cloud-based SaaS applications that serve government organizations with budgeting, reporting, and operational intelligence tools.

Specialize in building and maintaining robust ETL processes and automation solutions that connect external systems to OpenGov's platform. Responsibilities include hands-on development, system design, performance optimization, and cross-team collaboration to deliver scalable, production-ready integration solutions. Act as the final escalation point for complex ETL failures and lead key initiatives around automation, tooling, documentation, and platform evolution — ensuring data pipelines remain reliable and future-proof.

- Played a key role in selecting ETLWorks to replace SnapLogic, running proof-of-concept tests and technical evaluations to guide the final vendor decision.
- Led OpenGov's company-wide migration from SnapLogic to ETLWorks, completing core development within 1 quarter and delivering the full project under a tight 6-month deadline. Designed scalable, reusable shared pipelines — including template pipelines for the B&P suite used by the Data Solutions Engineering team — supporting 500+ government customers.
    - Voted Professional Services Person of the Month for outstanding contributions to the ETLWorks migration, including development, documentation, and cross-functional collaboration during the project's critical launch phase.
- Delivered 32 shared pipeline updates during the core migration window (May–Oct 2024), with ongoing enhancements bringing the total to 37+, including improvements based on post-migration feedback from the Data Solutions Engineering team.
- Leads a weekly best practices meeting with Technical Support and the Data Solutions Engineering team to align on ETLWorks shared pipeline changes, platform updates, troubleshooting strategies, and feedback-driven improvements across teams.
- Collaborated with the Services Transformation AI Task Force to develop a shared ETLWorks pipeline for customer-specific integrations within OpenGov's PLC suite. Contributed to a custom GPT solution that uses APIs to generate and schedule ETLWorks assets based on user inputs, reducing manual setup time and streamlining integration delivery.

- Authored core Confluence documentation for ETLWorks migration and shared pipelines, now used across Technical Support, Engineering, and the Data Solutions Engineering team to streamline onboarding, troubleshooting, and pipeline deployment.
- Proactively drove and validated 15+ ETLWorks product improvements by identifying platform gaps, collaborating directly with the vendor, and ensuring delivered solutions met real-world integration needs across teams.
- Built a custom ETLWorks-to-Grafana observability pipeline using webhooks and listener logic, then delivered 11 subsequent updates to expand visibility and improve real-time monitoring for faster issue resolution by Technical Support and Engineering.
- Created and routed severity-based ETL alerts from email and Grafana into OpsGenie, with mirrored Slack notifications enabling company-wide visibility and faster triage.
- Championed automatic update functionality with ETLWorks, reducing upgrade effort for customers and increasing platform reliability and trust.
- Created a scalable Jira automation system for the Integration Solutions team, including label-based workflows, auto-tagging rules, and plan views to streamline prioritization, backlog pruning, and deployment tracking.
- Evaluated and tested ETL tools, conducting proof-of-concept (POC) tests, and made critical vendor selection decisions based on hands-on expertise.
- Systematically managed and executed quarterly platform upgrades for SnapLogic and ETLWorks, ensuring platform stability through the development and manual execution of 60+ comprehensive test case scenarios across shared integration pipelines.
- Developed a pipeline to back up shared and Grafana pipeline configurations to S3 as part of each release, ensuring rollback readiness with documented Jira tickets and a release flow tested in DEV before PROD deployment.
- Received the 2022 OpenGov Rockstar Award for proactively identifying and resolving SnapLogic issues, resulting in a 9-month streak with no crashes, an 80-hour/quarter efficiency gain, and unlocking product and delivery value while reducing risk.
- Developed end-to-end RPA bots using Automation Anywhere (A360) to automate internal and customer-facing processes, including bulk report view generation, dashboard creation, and FTP-based data migration workflows. Leveraged OpenGov's GraphQL and REST APIs to build scalable automations used across multiple B&P implementations.
- Delivered 20+ front-end enhancements and accessibility fixes on OpenGov's procurement platform in collaboration with the engineering team, gaining practical experience with JavaScript, React, and Docker in a production environment.
- Successfully resolved a long-standing operational challenge by reducing the number of Snaplogic pipelines running by 16.2%, a problem that had persisted for years without resolution by both SnapLogic and our internal engineering teams, optimizing resource utilization and enhancing overall efficiency.
- Took ownership of 34 undocumented SnapLogic shared pipelines previously built and maintained by a departing R&D engineer, documenting their functionality and usage to improve onboarding, support efficiency, and long-term maintainability.

- Contributed to a mid-2023 internal hackathon project to develop a chatbot assistant using Python and LLMs, integrated with Slack and Jira to explore real-time query resolution for support operations.

Integration Specialist, OpenGov, Redwood City, CA July 2017 – February 2022

Specialized in developing and supporting custom ETL integrations from diverse client ERP systems (e.g., Tyler Technologies, Oracle) to OpenGov's platform using SnapLogic, Scribe, SQL, and Python. As one of the earliest team members, helped establish foundational ETL workflows, including the creation and maintenance of core SQL views in a shared GitHub repo. Managed 10–15 client projects concurrently, tailoring data pipelines to meet unique requirements and enable accurate reporting, occasionally building custom scripts for low-resource customers.

- Provided automation solutions through over 80 client integrations, significantly reducing the need for manual data uploads, which is a key factor in clients' decision to purchase, thereby implying considerable efficiency gains for end-users.
- Championed an extensive ETL initiative for the Oklahoma state government, handling daily integrations of 700,000 records and earning a spot bonus for meeting stringent deadlines that advanced the state's fiscal transparency.
- Developed a Python script to streamline the daily processing of 8 Accela Cloud REST API datasets, transforming and consolidating JSON data for enhanced city reporting services.
- Conducted detailed client training sessions on OpenGov's reporting and Chart of Accounts features to compensate for implementation analyst shortages, while also providing expert consultation to IT partners on leveraging iPaaS tools like SnapLogic and TIBCO Scribe for efficient ETL workflows.
- Implemented a sophisticated data pipeline for California's Fi$Cal agency, featuring an error-resilient system that maintained data integrity by automatically reverting to previous states in the event of discrepancies.
- Developed a specialized program to automate balance sheet and net income data flows, aligning budget entries and fiscal balances with established accounting principles to maintain accurate financial records.
- Transformed city government data workflows with Python scripts, enhancing decision-making with improved visual dashboards, leading to a 50% time savings in budget development as highlighted in a company case study; recognized with a perfect NPS score of +100 for exceptional client satisfaction.
- Collaborated closely with Boyce Computing, a specialized ERP solutions provider, to enhance their Key-Fund software with OpenGov-optimized reporting functionalities, significantly improving financial management efficiency for mutual clients.
- Developed and deployed a suite of Autohotkey and Python scripts to automate the transfer of data to SFTP servers from the Edmunds ERP system, equipped with error logging and alerting mechanisms to ensure data integrity and process continuity.

Data Analyst Intern, Haystagg, Manchester, NH Summer 2016

Programmatic advertising startup that utilized a genetic algorithm to predict Internet users' behavioral patterns primarily for situational targeting in ad campaigns.
Prepared data in SAS for machine learning, then generated visualizations for clients from Tableau based upon the results of the model.

- Analyzed a dataset with millions of observations and hundreds of variables, providing valuable insights to William Hill Bookmaker, including betting trends on greyhound racing, Australian football, and more.
- Extracted data from Semcasting's Big Data warehouse and cleaned the unstructured data, then segmented customer tier groups using logistic regression and K-means clustering.

Business Development Intern, Slydde (acquired by Hooch, Inc.) Summer 2015

Slydde was a mobile app company focused on enhancing the customer experience in bars and restaurants by streamlining the ordering process for drinks and cocktails.
Contributed to product design and conducted research. Responsibilities included brainstorming innovative app features, optimizing the user interface based on behavioral insights, and presenting critical research findings to the CEO. This internship provided valuable exposure to the startup's inception and early-stage dynamics, ultimately leading to the company's successful acquisition.

Technology Support Staffer, Osgood Bradley Building Summer 2012, 2013, 2014

The Osgood Bradley Building, an eight-story, 150,000 square foot industrial complex, housed a diverse range of businesses.
Responsible for diagnosing and resolving computer and network issues reported by tenants and businesses within the building. Managed and maintained a repository of spare PCs throughout the facility. My duties included building and optimizing numerous Windows-based PCs, providing technical assistance for software applications such as Microsoft Office, Word, Excel, and Google Docs. This experience allowed the development of practical IT skills while delivering essential support to the building's occupants.

App Developer Intern, Rocket Farm Studios Summer 2011

Rocket Farm Studios, a small mobile strategy and development company, offered me the opportunity to work as an App Developer Intern during the summer before my senior year of high school.
Independently created a prototype of the ZipText iPhone app for Android using AppInventor. The main component of ZipText was to enable users to personalize their top 10 contacts and top 10 text messages, which was an innovative concept at the time. Early exposure to app development sparked a passion for programming and laid the foundation for future pursuits in the tech industry.

Additional Academic Work

Teaching Assistant, 88-220 Policy Analysis, CMU — Fall 2015

Selected as a Teaching Assistant (TA) for Policy Analysis, a course with a strong emphasis on microeconomics and economic efficiency. As a TA, responsibilities included collaborating closely with fellow masters students, grading papers, meticulously reviewing and proofreading answer keys created by the master's students for accuracy, and occasionally providing support to the professor. This experience allowed for a deepened understanding of microeconomic principles and the development of effective communication and collaboration skills within an academic setting.

Research Assistant, Social and Decision Sciences Department, CMU — Spring 2014

Contributed to a research study focused on "Discrepancy Detection as a Measure of Intuitive Performance," which involved utilizing the Facial Action Coding System (FACS) and managing research participants, collecting data, and organizing and coding data for analysis in Microsoft Excel. Played a pivotal role in the execution of the research project, handling over 125 participants.
