haystagg

August 28, 2016

To whom it may concern:

This is a letter of recommendation for Brad Wyatt Jr.

Brad was an intern at Haystagg, Inc. during the summer of 2016. Haystagg is a programmatic digital media company that combines machine learning technology (genetic algorithms) and custom bidder optimization software. Together these technologies search billions of bid requests daily to select the best advertising opportunities while minimizing the ad spend.

Within a few days of joining us, Brad had mastered the Haystagg proprietary machine learning software and was building sophisticated predictive models without assistance. He also learned SAS faster than any employee I have ever hired. He now routinely uses that tool to tackle a wide variety of data manipulation and data analysis tasks. Brad is very focused and picks up new technologies remarkably quickly.

One of the projects I assigned Brad was to perform a cluster analysis for one of Haystagg's clients. With only basic direction, he completed the project generating strong useful cluster solutions.

I believe it speaks volumes about Brad that after leaving Haystagg he had enough interest in the field of machine learning to design and code his own version of genetic algorithm. In my experience this level of initiative is rare.

Given the right opportunity Brad Wyatt Jr. can be a real asset to your organization. Had Haystagg's financial situation been different we would have offered him full time employment. If I can answer any questions you might have regarding Brad and his time interning at Haystagg please call me directly.

Sincerely,

Doug Newell

CEO

Haystagg, Inc.
